Senior Backend Engineer (Python & Java)

Backend-focused Software Engineer with 10+ years of experience in designing, developing, and deploying scalable and secure backend systems. Specialized in **Python** and **Java**, with strong expertise in cloud-native **Microservices**, **data pipelines**, and **API-driven architectures**. Proven track record of improving reliability, reducing costs, and delivering backend solutions that power SaaS, finance, healthcare, and open-source platforms.

Core Skills

Java (Spring Boot), Python (Django, Flask), RESTful APIs, Microservices, Event-driven Architectures (Kafka, RabbitMQ), SQL/PostgreSQL, MySQL, AWS (ECS, Lambda, RDS, S3), Docker, Kubernetes, Jenkins, GitHub Actions

Additional Skills

GraphQL, OAuth/JWT Authentication, Azure, Google Cloud, Blockchain Integrations (Solidity, Hyperledger), PHP (Yii, Laravel)

Professional Experience

Senior Backend Engineer | PillarMarkets | NY, US (Remote)

July 2022 – May 2025

- Built and maintained high-throughput backend services using Java / Spring Boot, powering CRM, investor management, and analytics pipelines.
- Designed and implemented scalable microservices on AWS, improving fault tolerance and reducing downtime by 27%.
- Created robust RESTful APIs for authentication, payments, and data reporting, consumed by Next.js front-end and mobile clients.
- Developed event-driven systems with Kafka and RabbitMQ for real-time processing of property and financial data.
- Integrated compliance, encryption, and identity verification services into backend.
- Optimized backend CI/CD pipelines (Jenkins, GitHub Actions), cutting deployment cycles by 40%.

Backend Engineer | LimeSurvey | Hamburg, Germany (Remote)
Oct 2020 – Apr 2022

- Contributed to LimeSurvey's open-source backend built with PHP (Yii framework).
- Developed modules for survey logic, branching, and data export (CSV, XLS, SPSS).
- Optimized MySQL/PostgreSQL queries, reducing response times and improving concurrency.
- Implemented security features: input validation, SQL injection prevention, and API hardening.
- Maintained backend plugin system for modular extensions and integrations.

Backend Developer | Tayrona Tech Labs | Barranquilla, Colombia (Hybrid)
Jul 2018 – Jun 2020

- Designed backend APIs and services to support blockchain-based identity modules for educational platforms.
- Implemented digital signature verification and secure authentication flows.
- Optimized backend database design for large user imports and verification processes.
- Collaborated with blockchain teams to define data exchange protocols across services.

Junior Backend Developer | Dysruptia | Bogotá, Colombia (On- site)
Feb 2017 – Apr 2018

- Built backend systems using PHP (Laravel) and Node.js for CMS and APIs.
- Developed microservices to modularize monolithic systems, improving scalability.
- Implemented SEO-optimized API endpoints, boosting organic traffic by 60%.

Education

Universidad Distrital Francisco José de Caldas

Bachelor of System Engineering & Computer Science | Aug 2013 – May 2017
