Patrick Simpson

Rolla, MO 65401 | patricksimpsoon97 @gmail.com | +1 (484) 569 1340

Summary

As a senior full-stack engineer with over 8 years of hands-on experience and a solid foundation in computer science, I have a proven track record of efficiently transforming startup ideas and enterprise prototypes into robust, scalable, and market-ready solutions.

My expertise spans a wide spectrum of development domains, including but not limited to MVP creation, consumer-centric UI design, AI/ML integration, eCommerce platform development, and the design and implementation of REST and GraphQL APIs.

What sets me apart is my deep understanding of modern JavaScript and Python technologies, such as React, Next.js, Angular, Node, Python, and Typescript, enabling me to craft high-value solutions that meet the evolving needs of today's dynamic market landscape. I also specialize in architecting serverless infrastructures on cloud platforms like AWS, Azure, GCP, ensuring seamless deployment and scalability. Beyond technical proficiency, I am committed to fostering a collaborative team culture and continually strive to elevate project performance and code quality. With an insatiable curiosity and a relentless drive for innovation, I approach each project with a holistic perspective, focusing on solving meaningful problems and delivering exceptional value to clients and end-users alike. Customer satisfaction is at the heart of my work ethos, and I prioritize understanding the unique requirements of each project to ensure that solutions are not only technically sound but also aligned with business objectives. By leveraging my diverse skill set and passion for technology, I aim to drive impactful change and make a lasting contribution to the success of every project I undertake.

Experience

Senior Fullstack Engineer

Create.xyz | Apr 2023 – Present

- Built and iterated production-ready AI web apps on Create.xyz by describing requirements in natural language, enabling prompt-to-UI generation, instant hosting, and rapid MVP validation for internal tools and client-facing products.
- Prototyped and launched multi-page apps, dashboards, and data tools in days instead of weeks by leveraging Create.xyz's AI-generated layouts, visual editor, and built-in deployment pipeline.
- Designed and implemented AI-powered components (chat assistants, data explorers, internal CRMs) using Create.xyz's prompt-to-app workflow, reducing boilerplate UI coding and accelerating experimentation cycles for stakeholders.

- Integrated LLM capabilities (ChatGPT-style assistants and GPT Vision features) directly into Create.xyz apps to power conversational interfaces, document understanding, and image-based workflows.
- Used Create.xyz as a rapid prototyping environment to validate product ideas, user flows, and information architecture before implementing full-stack versions with traditional frameworks (React/Next.js/Node.js), improving alignment between stakeholders and engineering.
- Collaborated with non-technical teammates by using Create.xyz's AI builder and visual editing tools, allowing product and design partners to iterate on copy, layout, and UX without writing code.
- Deployed and maintained Create.xyz apps on managed cloud infrastructure with built-in hosting, security, and scaling, offloading ops tasks like SSL, basic auth, and traffic handling to the platform.
- Documented app behavior, feature scope, and architecture emerging from Create.xyz's generated projects to ensure maintainability when handing off prototypes to full-code environments and traditional CI/CD pipelines.

Senior Full Stack Engineer

Hubspot | Mar 2022 – Apr 2023

- Led end-to-end development of CRM and Marketing Hub features used by tens of thousands of customers, from technical design and API contracts to frontend UX implementation in React/TypeScript.
- Architected and shipped complex multi-step workflows (automation rules, sequences, pipelines) that orchestrate marketing, sales, and service data across HubSpot's Smart CRM.
- Implemented data-heavy UI components (dashboards, reporting, deal boards) with performant pagination, filtering, and real-time updates for large customer datasets.
- Designed and maintained microservices handling high-volume CRM events (contacts, deals, activities), ensuring low-latency APIs and high availability under peak traffic.
- Improved performance and reliability of critical customer-facing endpoints through query optimization, caching, and asynchronous processing, reducing p95 latency and error rates.
- Collaborated with SRE and platform teams to harden observability (logs, metrics, traces) and incident response for key HubSpot product surfaces.
- Built and maintained integrations between HubSpot and third-party systems (Salesforce, Stripe, Shopify, Google Ads, etc.), focusing on data sync, error handling, and idempotency.
- Contributed to internal data pipelines and event-driven architectures that power analytics, attribution, and AI-driven recommendations in the CRM.

Technologies: React.js, Next.js, JavaScript, TypeScript, Node.js, GraphQL, Python, Go, AWS, Azure, PostgreSQL, LLM, Gen AI, Visx, D3.js, Tailwind CSS, PyTorch, TensorFlow, Amazon Lex, Storybook, Bootstrap, Sentry, Datadog, Terraform, Airflow, Google Analytics

Full Stack Developer

Bright Data | Jul 2020 – Jan 2022

- Built and maintained full stack features for Bright Data's web data platform, enabling customers to discover, extract, and interact with web data at scale using modern JavaScript, TypeScript, and cloud-native services.
- Implemented data-intensive dashboards and self-service UIs for configuring proxy networks, scrapers, and datasets, providing real-time visibility into crawl status, success rates, and data quality.
- Developed and optimized backend services powering proxy management, automated web unlocking, and scraping pipelines, improving throughput and reliability for petabyte-scale data collection workloads.
- Designed APIs and event-driven workflows for customers to programmatically schedule crawls, access dynamically refreshed datasets, and stream web data into AI and BI pipelines.
- Collaborated with data, AI, and product teams to deliver vertical solutions (price intelligence, brand monitoring, ad verification, fraud detection) on top of Bright Data's core web data infrastructure.
- Improved performance and resilience of scraping and proxy services through better observability, rate-limit handling, and self-healing mechanisms, reducing failures and support tickets for enterprise clients.
- Ensured compliance and safe use of public web data by implementing guardrails, logging, and policy checks in customer-facing tools and internal services.

Technologies: JavaScript, Typescript, React, GraphQL, Node.js, Nest, AWS, AWS Amplify, SQL, MongoDB, Shopify, Headless CMS, PWA, Material UI, CI/CD, Builder.io, Unit Testing, Storybook, AI, WCAG, Google Analytics, Google Tag Manager, Stripe, Braintree, Chargebee

Software Engineer

HappyFunCorp| Nov 2019 - Jun 2020

- Worked on multiple projects with over 6 global organizations, developing websites and mobile apps spanning eCommerce, real estate ecosystems, fintech, and other industries.
- Managed full-stack programming tasks, utilizing technologies like React, Angular, Node.js, React Native, GraphQL, Python, Vue.js, Java, C#, among others, to deliver mission-critical applications.
- Formulated and executed comprehensive UI/UX strategies, producing wireframes and mockups tailored for small and medium-sized enterprises.
- Followed test-driven development (TDD) practices, writing comprehensive unit, integration, and end-to-end tests using Jest, Mocha, Cypress, Playwright and other frameworks to ensure code quality and reliability.
- Diagnosed and resolved bugs in a business-critical progressive web app, optimizing system performance with tools like DataDog, New Relic, Sentry, BugSnag, resulting in improved response time.
- Stayed up-to-date with the latest trends, design patterns, and best practices in web development, frontend frameworks, microservices, cloud technologies(AWS, GCP,

Azure), and DevOps, proactively applying them to improve system performance and developer productivity.
- Actively participated in product grooming sessions, collaborating closely with product and marketing teams to align technical solutions with business objectives and customer needs.
- Developed and maintained SDKs with multiple programming languages including JavaScript, Python, C#, etc., enabling seamless integration with various services based on a mono-repo with Nx and Lerna.

Technologies: JavaScript, Typescript, React, Angular, Vue.js, Next.js, RestAPI, GraphQL, Node.js, Express, Koa, Nest.js, AWS, Azure, GCP, SQL, MySQL, PostgreSQL, MongoDB, Java, Python, Jest, Cypress, Playwright, DataDog, D3.js, Styled Components, TailwindCSS, Material UI

Education

Bachelor of Computer Science Missouri University of Science and Technology, 2019

Skills

- **JavaScript (ES6, React/React Native, Next.js, Angular, Vue,**
- **Webpack)**
- **HTML, CSS(SASS), TailwindCSS, Material UI, Ant D, Styled**
- **Components.**
- **Typescript, GraphQL**
- **AI, LLM, NLP, Open AI, Gpt-3.5, GPT-4, AWS Connect**
- **Node.js (Express, Nest), Python(FastAPI, Django), Golang**
- **SQL(MySQL, PostgresSQL, MongoDB)**
- **AWS, Azure, GCP, Docker, Kubernetes, CI/CD**
- **Testing (Jest, Mocha, Cypress, ...)**
- **SEO, Accessibility, WCAG**
- **Git, Agile and TDD software development**
